## Job description

**Description of role:**

Stellar Solutions Aerospace Ltd (SSAL) is looking for a driven, experienced satellite operations processes Software Delivery Project Manager to support their customer's programme.

The successful candidate will create and maintain project plans for a customer within the SATCOM sector. This involves defining project goals, objectives, and deliverables, as well as identifying the tasks and activities required to drive a successful team.

The ideal candidate will demonstrate a combination of technical expertise and exceptional leadership skills. They must have a strong understanding of software development methodologies, such as Agile, as well as experience with project management tools and software. As the Scrum Master, the candidate must be flexible, adaptable and open to opportunities for the team to improve their workflows.

Experience in managing Technology driven Government with the UK Space Agency and European Space Agency Programmes is desirable. The due diligence and evidence required is key for this role.

Reporting to the UK Managing Director of SSAL, this role requires the ability to work as an individual contributor with minimal supervision, as well as in a team under the guidance of the customer. Their experience will be used to be a leader within the team, to help direct and guide the team into meeting the deliverables.

This role will be Virtually based, with expected travel into the customer's London office at least once a week, the role may require travel to other offices and sites in the UK.

### ROLE AND RESPONSIBILITIES

- Account Management
- Skills Management
- Regulatory and Compliance Management
- Communication Management
- Stakeholder Communication
- Project and Risk Management: Overseeing project timelines, budgets, and resources to ensure successful completion. Identifying potential risks and developing mitigation strategies to minimize impact on the project.

## SKILLS REQUIRED

- Must be a self-starter and confident to undertake this role with minimal oversight
- Strong software project delivery experience
- Proficiency in project management methodologies like Agile and Waterfall
- Ability to deliver customer-facing software/tools/portals
- UI/UX Experience and the application of this within its design
- Experience overseeing non-functional requirements like penetration testing, performance monitoring information security frameworks
- Exceptional problem-solving and decision-making abilities, creative and strategic thinking to solve operational challenges
- Experience in managing Projects with UK Space Agency and/or European Space Agency
- Experience in SATCOM solutions
- Experience in satellite operations processes
- Strong verbal and written communication skills to interact with various stakeholders

## BASIC QUALIFICATIONS

- Software Management and/or Systems Engineering background
- At least 5 years of experience working in the engineering organisation of a SATCOM company using common Agile methods
- Certified Scrum Master (CSM) certification and/or Agile Project Management certification
